

Pizza Expert Prayagraj

Next-Generation Autonomous Food-Tech Platform: High-Conversion E-Commerce, Real-Time Kitchen Display System (KDS), Smart Multi-Factor Fleet Dispatch, Doorstep Financial Integrity & Live GPS Telemetry.

AUTHOR & ENGINEERING LEAD

DeepMind & Antigravity Engineering

TARGET MARKET

Prayagraj (Allapur, Civil Lines, Katra, Naini, Teliyarganj)

PRODUCT STATUS

Production-Ready (Verified on master)

RELEASE VERSION & DATE

Version 2.4.0 • August 2026

Confidential & Proprietary — Pizza Expert Prayagraj Architecture, Workflows, Financial Controls & System Technical Specifications.

1. Executive Summary & Vision

Pizza Expert Prayagraj is a vertically integrated, hyper-local food-tech platform engineered to deliver artisanal wood-fired sourdough pizzas with industry-leading speed, transparency, and operational efficiency across Prayagraj, Uttar Pradesh.

Unlike traditional aggregator-dependent restaurants that suffer from 25–35% commission leakages and opaque delivery timelines, Pizza Expert operates as an end-to-end direct-to-consumer (D2C) ecosystem. The platform seamlessly interlinks:

- **High-Speed Customer E-Commerce Experience:** Ultra-responsive Next.js 16 Turbopack storefront with smart cart, customized crust builders, QR dine-in ordering, and Razorpay payment verification.
- **Kitchen Display System (KDS):** Real-time digital line-cook management with automated ticket preparation timers, oven capacity allocation, and bidirectional fleet handoff.
- **Smart Multi-Factor Auto-Dispatch Engine:** Automated rider assignment based on Haversine geographic proximity to the Allapur store hub, driver active workload, and delivery SLA forecasting.
- **Strict Financial Control & Cash Remittance:** Enforced Razorpay signature verification gates prior to kitchen queuing, doorstep Cash on Delivery (COD) collection enforcement, and Store Manager counter remittance reconciliation.
- **Sub-Second GPS Telemetry & Customer Tracking:** Live Leaflet map streaming driver coordinates, milestone tracking, and 4-digit cryptographic OTP handshakes.

Core Business Value Proposition

Zero third-party marketplace commissions, 20–30 minute guaranteed hot-delivery SLA across Prayagraj, 100% financial reconciliation with zero cash leakage, and unified CRM loyalty retention.

2. System Architecture & Technology Stack

The platform is built on an enterprise-grade, serverless-ready architecture optimized for sub-100ms API responses and real-time bidirectional synchronization:

LAYER	TECHNOLOGY / SERVICE	KEY FUNCTION & ARCHITECTURAL RATIONALE
Frontend Framework	Next.js 16.3.0 (Turbopack, App Router)	Server-side rendering (SSR), static generation for 51 production routes, edge API routes, dynamic metadata, and lightning-fast client hydration.
Styling & UI	Tailwind CSS & Vanilla Design System	Rich artisanal wood-fired theme (`#B91C1C` Crimson, `#1C1917` Charcoal, `#F9F5F5` Cream), zero layout shifts, full mobile responsiveness.
Database & Auth	Supabase (PostgreSQL 15 + RLS)	Relational integrity across orders, products, deliveries, drivers, and payments with Row-Level Security (RLS) policies.
Realtime Subscriptions	Supabase Realtime (WebSockets)	Sub-second event streaming across channels (`tracking-\${orderId}`, `kitchen-kds`, `admin-deliveries-live`, `driver-partner-\${id}`).
Payment Gateway	Razorpay PG + Cash on Delivery (COD)	UPI, NetBanking, Credit/Debit Cards, Automated Webhook Signature Verification, and 2-phase COD phone verification for high-ticket orders.
Mapping & GPS Radar	Leaflet + OpenStreetMap + HTML5 Geolocation	Interactive vector radar, breadcrumb tracking, Prayagraj road corridors, dynamic distance calculations, and real-time rider interpolation.
Notifications & Alerts	Resend Email API + Web Audio Context API	Transactional order receipts, store owner instant email alerts, and multi-frequency sound effects (kitchen chime, alert gong, success chime).

3. User Roles, Personas & Permissions (RBAC)

1. Online Customer

PUBLIC USER

Discovers pizzas, customizes crust/toppings, pays online or via COD, tracks live GPS delivery, earns loyalty points, and leaves reviews.

2. Kitchen Chef / Line Cook

STAFF ROLE

Operates the KDS screen, monitors baking timers, manages oven queues, views assigned delivery partner badges, and hands off orders.

3. Delivery Partner / Rider

PARTNER ROLE

Receives auto-dispatched trips, broadcasts live GPS coordinates, collects COD cash/UPI at doorstep, verifies 4-digit OTP, and deposits cash at store counter.

4. Store Manager & Super Admin

ADMIN ROLE

Oversees fleet radar, settles rider COD cash remittances, manages inventory/coupons, audits financial ledgers, and views sales analytics.

4. Detailed Feature Specifications & Workflows

4.1 Customer Storefront & E-Commerce Module

- **Artisanal Pizza Menu:** Categorized by Classics, Gourmet Specials, Wood-Fired Sourdough, Sides & Beverages with Veg/Non-Veg indicators, spice level badges, and nutritional details.
- **Dynamic Product Customizer:** Crust selection (Hand-Tossed, Thin Crust, Cheese Burst, Sourdough), size variations (7" Regular, 10" Medium, 12" Large), extra toppings, and custom chef notes.
- **Dine-In QR Code Ordering** (`/dine-in/[tableId]`): Allows in-store patrons to scan physical table QR codes, order directly to the kitchen, and pay digitally without waiting for waitstaff.
- **Abandoned Cart Recovery System:** Automated background cron job (`/api/cron/abandoned-cart`) that identifies abandoned checkouts and triggers recovery email reminders.
- **Loyalty & Rewards Program:** Customers earn 10 points per ₹100 spent, unlocking tiered badges (Bronze, Silver, Gold, VIP Pizza Connoisseur) with instant redemption at checkout.

4.2 Strict 2-Gate Payment & Checkout Engine

To prevent kitchen queue bloat and eliminate delivery fraud, the platform enforces strict payment gateways:

PAYMENT METHOD	INITIAL STATUS	VERIFICATION MECHANISM	TRIGGER TO KITCHEN & AUTO-DISPATCH
Razorpay (Online UPI/Card)	PENDING	Server-side HMAC-SHA256 signature verification in <code>verifyRazorpayPayment</code> .	Strict Gate: Order is confirmed, sent to KDS, and dispatched to driver <i>only after</i> payment is successfully verified.
Cash on Delivery (Standard)	CONFIRMED	Standard checkout (< ₹1,000 threshold); assigned initial OTP.	Immediately queued to kitchen KDS and auto-dispatched to nearest rider.
Cash on Delivery (High Value)	COD PENDING	Orders ≥ ₹1,000 enter verification queue for store manager phone confirmation.	Queued to kitchen only after store manager confirms order via admin panel.

4.3 Kitchen Display System (KDS) & Operations Hub

Located at `/admin/kitchen`, the KDS replaces paper kitchen dockets with an interactive touch-optimized board:

- **4 Real-Time Kanban Stages:** `'Confirmed (New Orders)' → 'In Oven (Baking)' → 'Out for Delivery' → 'Delivered'`.
- **Preparation Timers:** Dynamic timer on every ticket showing elapsed preparation time with color-coded alerts (Normal <10m, Warning 10-15m, Critical >15m).
- **Interconnected Rider Badges:** Every ticket clearly shows:
 - ``🚲 Rider Name • Vehicle • Phone`` (e.g. `🚲 Amit Kumar • Bike (UP 70 AB 1234) • +91 9876543210`)
 - 4-Digit Delivery Verification OTP code.
 - Rider readiness status (Waiting at Kitchen Pass vs En Route to Store).
- **1-Click Auto-Dispatch & Manual Override:** Chefs can 1-click auto-dispatch or manually reassign any idle driver directly from the kitchen ticket.

- **Audio Context Chimes:** Plays a wood-fired kitchen chime on new incoming orders and alert sound on urgent notifications.

5. Fleet Management, Auto-Dispatch & Driver Partner App

5.1 Smart Multi-Factor Auto-Dispatch Engine

The auto-dispatch engine ('app/actions/deliveries.ts') evaluates all registered and online drivers across Prayagraj using a multi-factor ranking algorithm:

```
Candidate Score = (Is_Idle ? 0 : 50) + Haversine_Distance(Store_Hub_Lat_Lng, Driver_Current_Lat_Lng)
Lowest Candidate Score = Optimal Delivery Partner Selected for Dispatch
```

- **Allapur Store Geographic Hub:** Latitude `25.4358`, Longitude `81.8682`.
- **Batch Dispatch Engine:** Store managers can click "Auto-Dispatch All" to simultaneously assign all unassigned queue orders to available drivers in under 500ms.
- **Instant Queue Recirculation:** When a driver completes an order, the system automatically checks the pending queue and auto-assigns the next waiting order to that newly freed driver.

5.2 Driver Partner Progressive Web App (`/partner/deliveries`)

The mobile-first driver interface provides an end-to-end 5-step trip progression:

STAGE	DRIVER ACTION	SYSTEM EVENT & CUSTOMER SYNCHRONIZATION
1. Assigned	Rider receives dispatch alert & reviews order items, total, and customer location.	Rider clicks "Accept Delivery Trip" → System updates status to `accepted`.
2. Picked Up	Rider collects packed hot pizza box from Allapur kitchen pass.	Rider clicks "Confirm Food Picked Up" → KDS & Order status sync to `out_for_delivery`.
3. En Route	Rider starts bike ride toward customer address.	GPS broadcasting activates; live coordinates stream to customer Leaflet map.
4. Arrived	Rider reaches customer doorstep in Prayagraj.	Rider clicks "Arrived at Doorstep" → Customer notified via app and SMS.
5. Payment & Delivery	Mandatory COD Payment Gate: Rider collects Cash/UPI, checks collection box, enters customer 4-digit OTP.	System validates OTP & COD collection → Marks order `delivered`, records payment, frees rider, and adds cash to driver ledger.

6. Financial Integrity, COD Remittance & Store Settlement

COD Cash Remittance Workflow Rule

All Cash on Delivery (COD) funds collected by delivery partners at customer doorsteps are strictly tracked in a live "Cash-in-Hand Ledger" and must be deposited at the store counter to the Store Manager upon return.

1. Rider Cash in Hand Tracking

DRIVER PORTAL

- Displays total unremitted cash collected in hand: `₹ [Amount]`.
- Itemized list of delivered COD orders waiting for counter deposit.
- Clear policy banner reminding rider to deposit funds upon return to Allapur hub.

2. Store Manager Counter

ADMIN
PAYMENTS

Settlement

- Dedicated **COD Cash Remittance** tab in `/admin/payments`.
- Displays each driver's total unremitted cash balance.
- 1-Click **"Accept & Settle Cash (₹[Amount])"** clears driver ledger to ₹0.
- Updates payment record to `settled\_at\_store` with manager audit trail.

7. Database Schema & Data Models (PostgreSQL)

The application utilizes a highly normalized PostgreSQL schema on Supabase with foreign key constraints, indexes, and automated timestamp triggers:

TABLE NAME	PRIMARY KEYS & REFERENCES	KEY COLUMNS & DATA TYPES
`orders`	`id` (UUID PK), `user_id` (FK → `profiles.id`)	`status` (TEXT: pending, confirmed, preparing, out_for_delivery, delivered, cancelled), `subtotal`, `tax`, `delivery_fee`, `discount`, `total`, `address_json` (JSONB), `notes`, `created_at`.
`deliveries`	`id` (UUID PK), `order_id` (FK → `orders.id` UNIQUE), `driver_id` (FK → `drivers.id`)	`status` (TEXT: unassigned, assigned, accepted, picked_up, heading_to_customer, arrived, delivered), `otp_code` (TEXT), `pickup_time`, `delivered_time`, `updated_at`.
`drivers`	`id` (UUID PK → `profiles.id`)	`name` (TEXT), `phone` (TEXT), `vehicle_type` (TEXT), `vehicle_number` (TEXT), `is_online` (BOOLEAN), `is_busy` (BOOLEAN), `current_lat` (NUMERIC), `current_lng` (NUMERIC), `last_location_update`.
`payments`	`id` (UUID PK), `order_id` (FK → `orders.id` UNIQUE)	`gateway` (TEXT: razorpay, cod), `gateway_order_id`, `gateway_payment_id`, `amount` (NUMERIC), `status` (TEXT: pending, paid, failed, refunded), `created_at`.
`order_items`	`id` (UUID PK), `order_id` (FK), `product_id` (FK)	`quantity` (INT), `unit_price` (NUMERIC), `selected_options` (JSONB).
`products`	`id` (UUID PK), `category_id` (FK)	`name`, `slug`, `description`, `price`, `image_url`, `is_veg`, `is_available`, `stock_quantity`, `created_at`.
`order_status_history`	`id` (UUID PK), `order_id` (FK)	`status` (TEXT), `notes` (TEXT), `created_at` (TIMESTAMPTZ).

8. Service Level Agreements (SLAs) & Quality Benchmarks

Operational SLAs TARGET • Order Confirmation to Oven Fire: < 3 minutes. • Oven Baking Duration: 5–7 minutes at 450°C. • Kitchen Pass to Rider Pickup: < 2 minutes. • Rider Transit to Customer Doorstep: 12–18 minutes across Prayagraj. • Total Order-to-Delivery SLA: < 30 minutes guaranteed.	Technical Performance Targets BENCHMARK • Page Load Time (LCP): < 1.2 seconds on 4G networks. • WebSocket Telemetry Latency: < 250 milliseconds. • Build Route Completeness: 51/51 routes compiling with 0 TypeScript errors. • Financial Cash Reconciliation: 100% accurate with 0 unverified COD discrepancies.
---	--

9. Release Sign-Off & Verification Summary

All features documented in this Product Requirement Document have been fully developed, tested, and verified for production deployment:

MODULE	IMPLEMENTATION STATUS	VERIFICATION EVIDENCE
E-Commerce & Smart Cart	COMPLETED & LIVE	Verified cart store, dynamic customization, PIN zone validation, and instant coupon application.
Razorpay Signature Verification Gate	COMPLETED & LIVE	Verified server-side HMAC validation in `app/actions/razorpay.ts` before KDS queuing.
Kitchen Display System (KDS)	COMPLETED & LIVE	Verified live stage transitions, preparation timers, and rider badges in `app/admin/kitchen/page.tsx`.
Fleet Command & Proximity Auto-Dispatch	COMPLETED & LIVE	Verified Haversine algorithm, batch dispatch, and manual reassign in `app/actions/deliveries.ts`.
Driver Partner App & Doorstep COD Gate	COMPLETED & LIVE	Verified 5-step trip progression, COD payment check, and OTP handshake in `app/partner/deliveries/page.tsx`.
Store Manager COD Cash Settlement	COMPLETED & LIVE	Verified driver cash-in-hand ledger and counter settlement panel in `app/admin/payments/page.tsx`.
Live GPS Telemetry & Customer Tracking	COMPLETED & LIVE	Verified real-time Leaflet map and driver telemetry in `app/(public)/track/page.tsx`.
